Japanese expertise can enhance Indian diagnostic sector

Our Bureau, Mumbai

The huge potential existing in the diagnostic technologies sector in India can be enhanced through collaboration with Japan, which is a big success story in the world, according to some of the experts.

Shankar Anand, Executive Officer, and General Manager of Med-India Healthcare, a Jaypee Group company, said that diagnostic technologies on India are in a double-digit growth stage. A huge potential exists in the diagnostic technologies sector in India, which is showing a high success story in Japan, according to some of the experts.

"Healthcare in India is growing at a very fast pace. It is expected to be GMF in the future, and the government has set a target to bring this sector to the forefront," Anand added.

The programme, "India-Japan Information Exchange - Diagnostic Technologies," which will be held in Tokyo, Japan, on August 4, is to be supported by the Ministry of Health and Family Welfare.

The programme has been approved by the Ministry of Health and Family Welfare.

The programme is part of the India-Japan Health Sectoral Programme, which includes capacity-building and human resource development in India.

India has a large and growing population, making it an ideal market for diagnostic technologies. The programme aims to strengthen the diagnostic services in India by sharing best practices and knowledge with Japan.

The programme will focus on three main areas:

1. Diagnostic technologies: The programme will provide training on various diagnostic technologies, including molecular diagnostics, radiology, and pathology.
2. Quality assurance: The programme will provide training on quality assurance for diagnostic laboratories.
3. Regulatory compliance: The programme will provide training on regulatory compliance for diagnostic laboratories.

The programme will be conducted in collaboration with the National Centre for Genetic Engineering and Biotechnology (NCB) and the Ministry of Health and Family Welfare.

The programme will be held in Tokyo, Japan, on August 4, and will be attended by Indian and Japanese experts.

The programme will provide training on various diagnostic technologies, including molecular diagnostics, radiology, and pathology.
